Terminal Commands
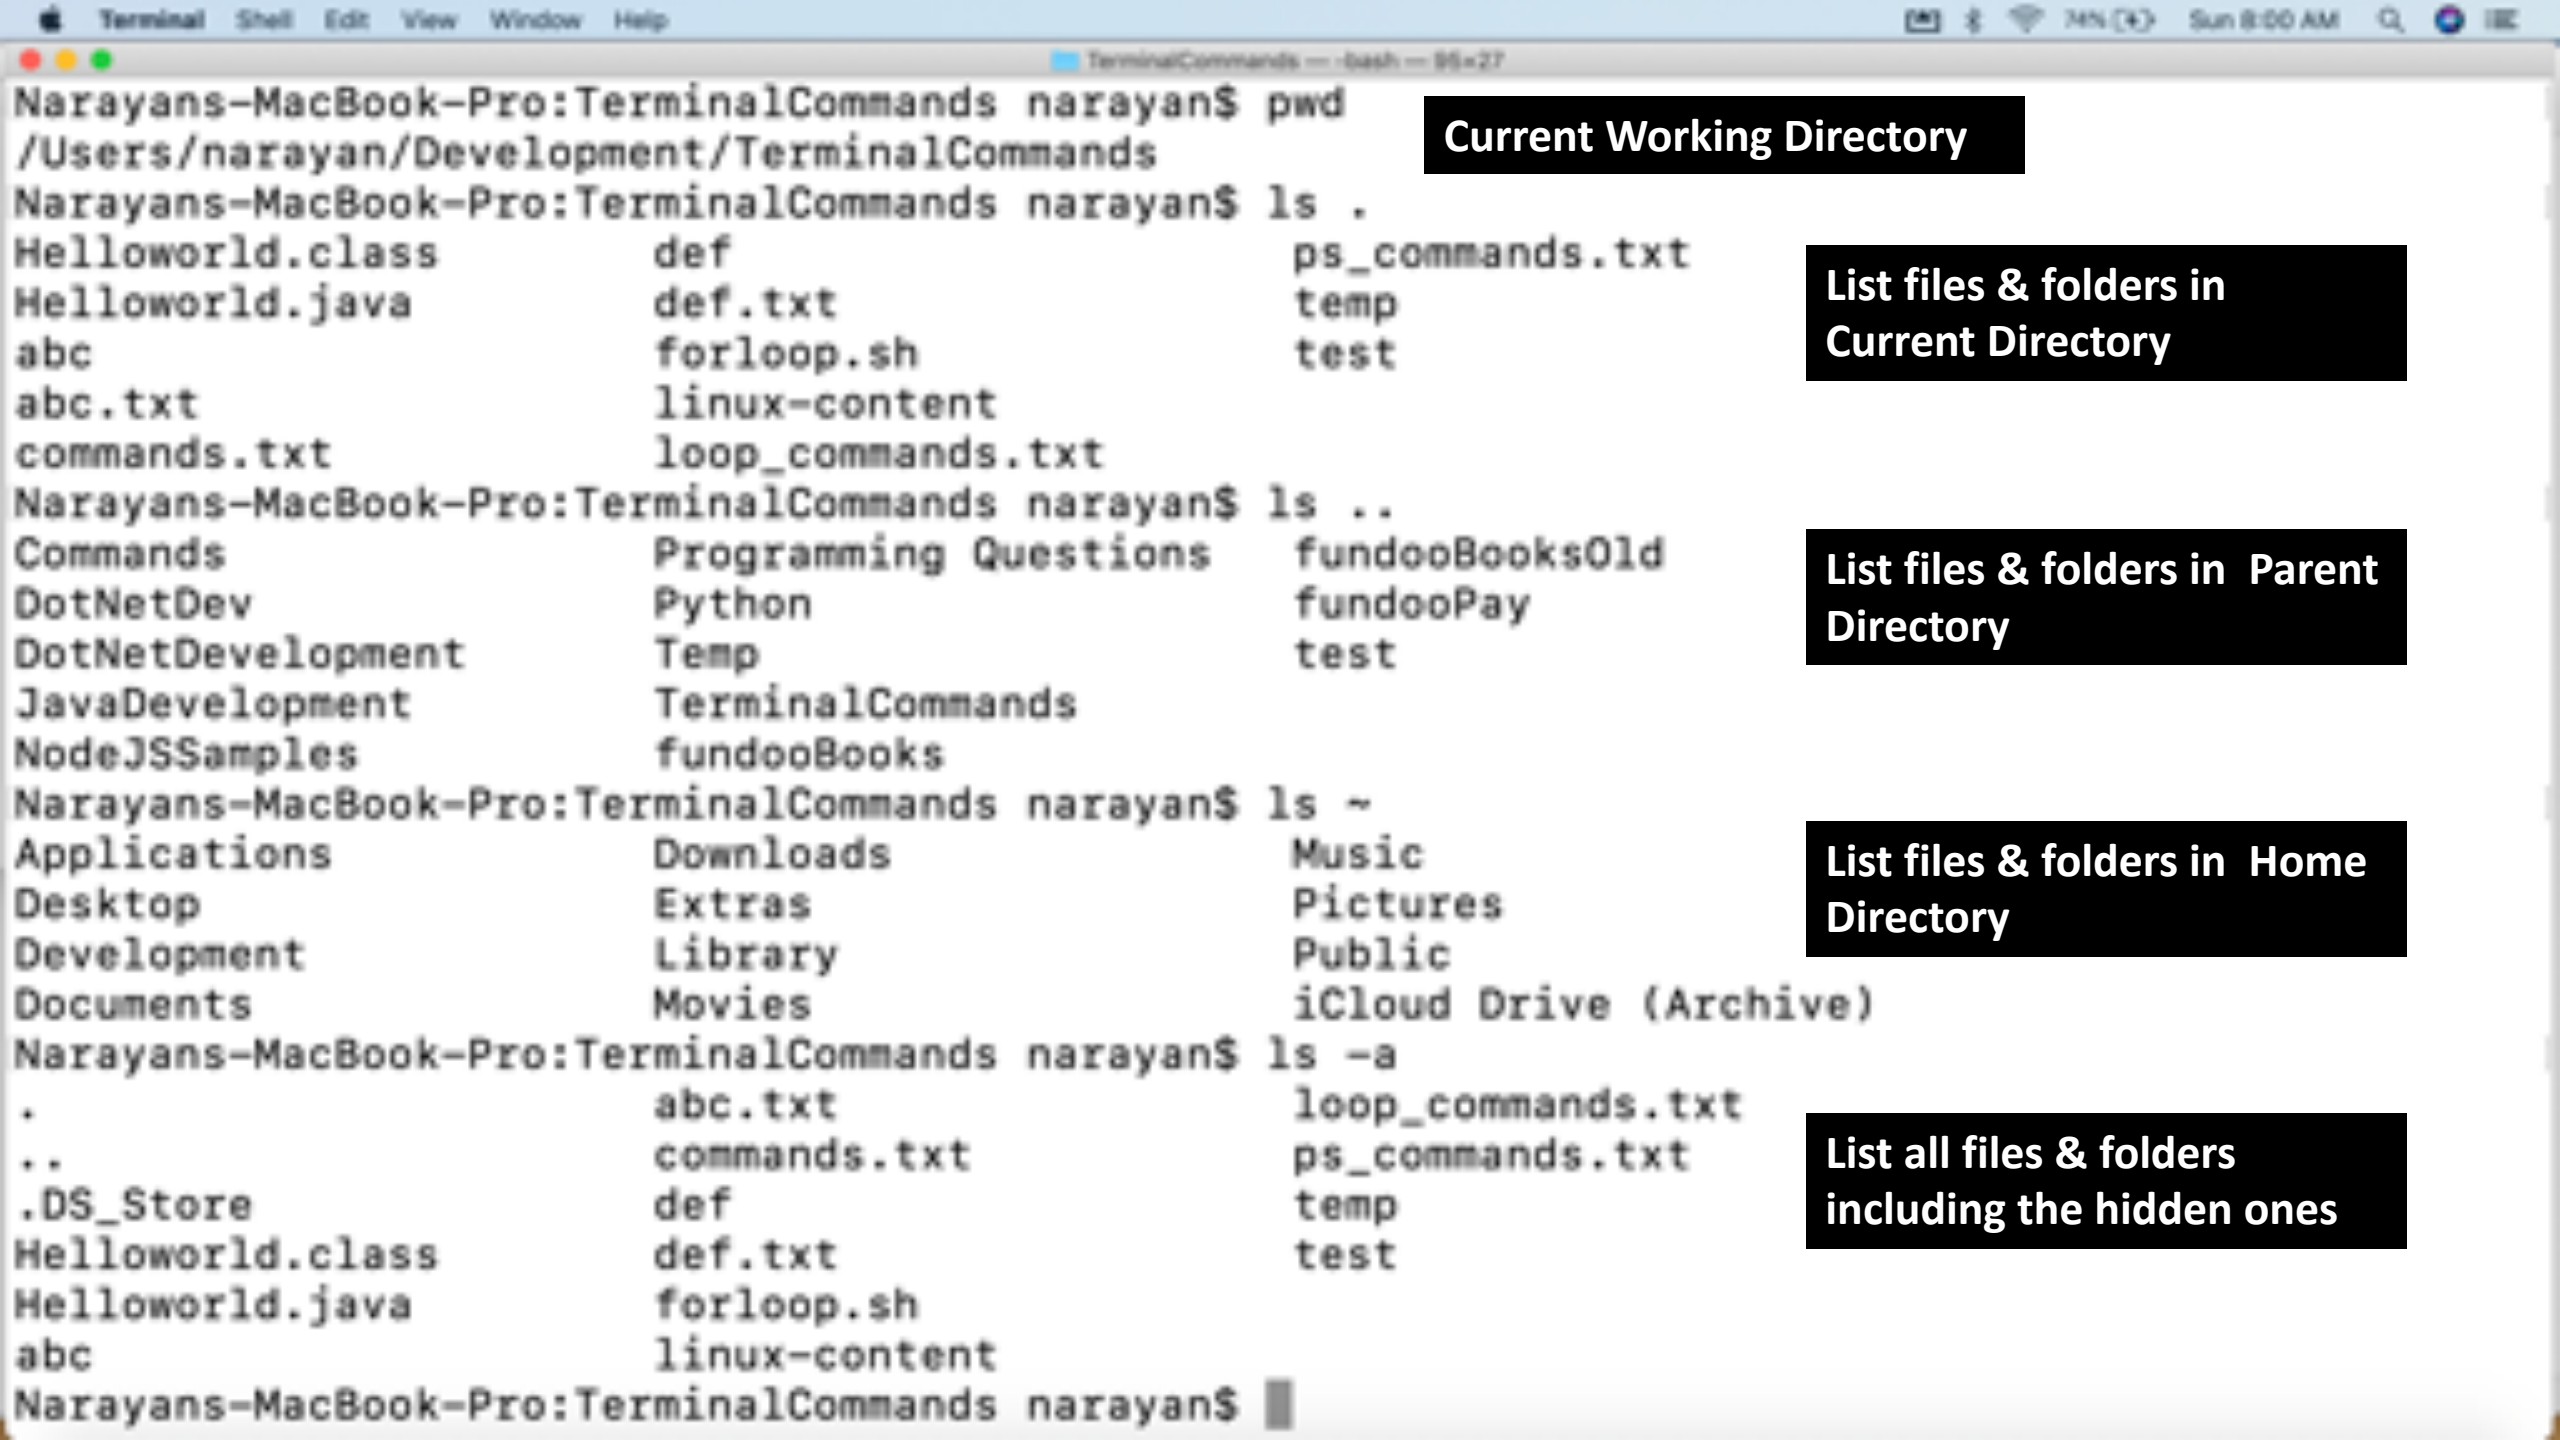

Prerequisites to learn CLI

- CLI - Command Line Interface
- Check Java is installed *java –version*
- Java Installation - https://exercism.io/tracks/java/installation#linux
- *mkdir TerminalCommands*
- *cd TerminalCommands/*
- Check git is installed - *git --version*
- *git clone https://github.com/edurekavivekh/linux-content.git*
- Change Dir to *cd linux-content/* and do *ls*
- You will see linux_chit_sheet.pdf – for Linux Commands and linux_problem_sheet.pdf – to solve problems using linux commands

- Check your Current Working Directory
- List all files in your Current Working Directory, Top level Directory, current, parent & home Directory.
- List also the hidden files & Directory.
- List all Files & Directory in a long format
- Create a temp Folder
- Remove the temp Folder
- Create a nested temp/temp folder

File & Directory Commands

```
Narayans-MacBook-Pro:TerminalCommands narayan$ pwd
/Users/narayan/Development/TerminalCommands
Narayans-MacBook-Pro:TerminalCommands narayan$ ls .
Helloworld.class          def                    ps_commands.txt
Helloworld.java           def.txt                temp
abc                       forloop.sh             test
abc.txt                   linux-content
commands.txt              loop_commands.txt
Narayans-MacBook-Pro:TerminalCommands narayan$ ls ..
Commands                  Programming Questions  fundooBooksOld
DotNetDev                 Python                 fundooPay

Narayans-MacBook-Pro:temp narayan$ touch test
Narayans-MacBook-Pro:temp narayan$ ls -p
temp/    test
Narayans-MacBook-Pro:temp narayan$ █
```

List Files & Folder in Long Format

Create Directory temp

Remove recursively all files & folders in temp directory

Create Nested Directory

Change Directory to temp

Create a empty test file

Show all files and also show directories ending with /

File Management

- Change directory to temp
- Create a empty test file.
- Copy test file into another test1 file
- move test1 file to test2 file.
- Create a link to the test file in your home dire.
- Change dir to home & remove the temp folder.
- man ls ⇒ to list all options
- whereis ls ⇒ find the location of the command

```
Narayans-MacBook-Pro:temp narayan$ cp test test1
Narayans-MacBook-Pro:temp narayan$ ls -p
temp/     test      test1
Narayans-MacBook-Pro:temp narayan$ mv test1 test2
Narayans-MacBook-Pro:temp narayan$ ls -p
temp/     test      test2
Narayans-MacBook-Pro:temp narayan$ ln -s test temp/
Narayans-MacBook-Pro:temp narayan$ ls -p temp/
test
Narayans-MacBook-Pro:temp narayan$ ln -s ../linux-content/linux_chit_sheet.pdf ~/QuickLink/
Narayans-MacBook-Pro:temp narayan$ ls -l ~/QuickLink/
total 0
lrwxr-xr-x  1 narayan  staff  37 Nov  3 10:03 linux_chit_sheet.pdf -> ../linux-content/linux_ch
it_sheet.pdf
Narayans-MacBook-Pro:temp narayan$ whereis ls
/bin/ls
Narayans-MacBook-Pro:temp narayan$ ls /bin
[                dd              ksh             pax             stty
bash             df              launchctl       ps              sync
cat              echo            link            pwd             tcsh

Narayans-MacBook-Pro:temp narayan$ man ls█
```

Copy test file into test1

Move test1 file into test2

Link test file in temp dir

Link linux_chit_sheet pdf to QuickLink in home dir

Note on listing shows the location of actual file

Locate commands using whereis

Looking up bin folder in root dir

Lookup Command using man. Use q to quit

the **-P** option.

-1   (The lowercase letter ``ell''.) List in long format. (See below.) If the output is to a terminal, a total sum for all the file sizes is output on a line before the long listing.

-m   Stream output format; list files across the page, separated by commas.

-n   Display user and group IDs numerically, rather than converting to a user or group name in a long (-1) output. This option turns on the -1 option.

-O   Include the file flags in a long (-1) output.

-o   List in long format, but omit the group id.

-P   If argument is a symbolic link, list the link itself rather than the object the link references. This option cancels the -H and -L options.

-p   Write a slash (`/') after each filename if that file is a directory.

-q   Force printing of non-graphic characters in file names as the character `?'; this is the default when output is to a terminal.

-R   Recursively list subdirectories encountered.

/-p

Searching for –p string in the man ls. Also use n and p to look for next & previous –p string

→ change directn to etc
- list the passwd file
- change to previous directy.

→ view the file
- Browse the file line by line
- Display first 10 lines of the /etc/passwd file
- Display last 10 lines of /etc/passwd file.

View & Browse Files

```
Narayans-MacBook-Pro:temp narayan$ ls -l /etc/passwd
-rw-r--r--  1 root  wheel  6804 Feb 26  2019 /etc/passwd
Narayans-MacBook-Pro:temp narayan$ less /etc/passwd
Narayans-MacBook-Pro:temp narayan$ head /etc/passwd
##
# User Database
#
# Note that this file is consulted directly only when the system is running
# in single-user mode.  At other times this information is provided by
# Open Directory.
#
# See the opendirectoryd(8) man page for additional information about
# Open Directory.
##
Narayans-MacBook-Pro:temp narayan$ tail -2 /etc/passwd
_timed:*:266:266:Time Sync Daemon:/var/db/timed:/usr/bin/false
_reportmemoryexception:*:269:269:ReportMemoryException:/var/db/reportmemoryexception:/usr/bin/f
alse
Narayans-MacBook-Pro:temp narayan$ cat /etc/passwd▮
```

List in Long Format /etc/passwd file

Browsing the passwd file using less

Display first 10 lines from top

Display last 2 lines from bottom

Browsing the complete file

Pipe & Grep Commands

- cmd1 | cmd2
  stdout of cmd1 to cmd2
- find all directories in the current working directory.
- find passwd file in /etc/
- find all files in the /etc/ directory

```
TerminalCommands $ find . -size +5M
./linux-content/linux_chit_sheet.pdf

Narayans-MacBook-Pro:TerminalCommands narayan$
```

Writing USER, SHELL and HOME variable to standard output using echo
NOTE: Variable is referred using $

Displaying Disk Usage in Human Readable Form

Piping Disk Usage of current folder to Sort in Descending Order

Piping Disk Usage in Ascending Order NOTE – Option n is used to Sort Numeric Value

1: Finding commands.txt file in Development folder
2: Finding empty file in current folder

Process Management

- Use nano editor to create a HelloWorld java program.
- The HelloWorld java program would print hello world every minute in an infinite loop
- Display the current running processes
- Display realtime the top processes.
- Identify the java process & kill it.
- Start the HelloWorld program in the Background
- Display the Background jobs
- Bring the most recent background job to foreground

```
Narayans-MacBook-Pro:TerminalCommands narayan$ nano -T 3 Helloworld.java
Narayans-MacBook-Pro:TerminalCommands narayan$ javac Helloworld.java
Narayans-MacBook-Pro:TerminalCommands narayan$ ls -l
total 24
-rw-r--r--   1 narayan   staff   612 Nov   3 15:06 Helloworld.class
-rw-r--r--   1 narayan   staff   224 Nov   3 15:06 Helloworld.java
-rwxr-xr-x   1 narayan   staff   347 Nov   2 12:38 forloop.sh
drwxr-xr-x   9 narayan   staff   288 Nov   1 16:16 linux-content
drwxr-xr-x   5 narayan   staff   160 Nov   3 10:02 temp
Narayans-MacBook-Pro:TerminalCommands narayan$ java Helloworld  &
[1] 68193
Narayans-MacBook-Pro:TerminalCommands narayan$ Hello world

Narayans-MacBook-Pro:TerminalCommands narayan$ ps -elf | grep java | grep -v grep
   501 68193 57392       4006   0  31  0  8030176  30076 -                                 0
:00.16 /usr/bin/java He   3:06PM
Narayans-MacBook-Pro:TerminalCommands narayan$ jobs
[1]+  Running                     java Helloworld &
Narayans-MacBook-Pro:TerminalCommands narayan$ fg %1
java Helloworld

```

Displaying Data in data.csv file

Displaying the Employee Name and Base Salary whose Job Title is Captain

Displaying the total salary received by Captains

Displaying the average salary received by Captains NOTE: END is used to indicate post process and NR is an inbuilt variable indicating Number of Records

Conditions & Loops

- for loop
  ```
  for arg in `.....`;
  do
      ..... ;
      .... ;
  done
  ```
- eg: Move files from One folder to their respective folders.

Step1: Create two empty files abc.txt & def.txt

Step2: print the list of .txt files.

Step3: Pipe it to awk & print the file name.

Step4: Do it in for loop for each file & print the file name

```
for files in `ls *.txt`;
do echo $files | awk -F. `{print $1}`;
done
```

```
Narayans-MacBook-Pro:temp narayan$ ls *.txt
abc.txt def.txt
Narayans-MacBook-Pro:temp narayan$ for files in `ls *.txt`; do echo $files; done
abc.txt
def.txt
Narayans-MacBook-Pro:temp narayan$ for file in `ls *.txt`; do folderName=`echo $file | awk -F.
'{print $1}'`; echo $folderName; done
abc
def
Narayans-MacBook-Pro:temp narayan$ for file in `ls *.txt`;
> do
> folderName=`echo $file | awk -F. '{print $1}'`;
> mkdir $folderName;
> cp $file $folderName;
> echo Copied $file to $folderName/;
> done
Copied abc.txt to abc/
Copied def.txt to def/
Narayans-MacBook-Pro:temp narayan$ ls -p
abc/              def/              folderName/        test
abc.txt           def.txt           temp/              test2
Narayans-MacBook-Pro:temp narayan$ ls -p abc/
abc.txt
Narayans-MacBook-Pro:temp narayan$ ls -p def/
def.txt
Narayans-MacBook-Pro:temp narayan$ █
```

Using for loop to display files with ext .txt

Using for loop and awk to display file names

1: Using for loop to read in each file with ext .txt
2: Staring the loop with do
3: Using awk to read the file name into folderName
4: Making Directory with the file name
5: Coping the file into the folder using $folderName
6: Displaying the result to stdout
7: indicating done to close for loop

Displaying the files in current folder and the new folders created by the for loop

Step 5: Assign the output of 4 to a folder variable & print the folder name

Step 6: Create directory using the folder variable
Note: this is the second command within do loop.

Step 7: move the files to the folder directory. This is 3rd command

Step 8: Done.

Conditions & Loops

Conditions & Loops

```
GNU nano 2.0.6              File: forloop.sh              Modified

#!/bin/bash -x

for file in `ls *.txt`;
do

    folderName=`echo $file | awk -F. '{print $1}'`;
    #echo "checking for already existing directory started";
    if [ -d $folderName ];
    then
        rm -R $folderName;
    fi
    #echo creating foler ${folderName};
    mkdir $folderName;
    #echo copying ${file} to ${folderName};
    cp $file $folderName;

done

```

1: Creating forloop.sh script file to copy txt files to resp dir
2: Specifying bash shell and setting debug option with -x
3: Using for loop to read each file

1: Using if condition to check folder exists
2: then removing the folder along with the files
3: Closing the if loop with fi

Creating the directory with the file name and then copying the files into the corresponding directory

```
Narayans-MacBook-Pro:TerminalCommands narayan$ nano -T 3 forloop.sh
Narayans-MacBook-Pro:TerminalCommands narayan$ ./forloop.sh
++ ls abc.txt def.txt
+ for file in '`ls *.txt`'
++ echo abc.txt
++ awk -F. '{print $1}'
+ folderName=abc
+ '[' -d abc ']'
+ rm -R abc
+ mkdir abc
+ cp abc.txt abc
+ for file in '`ls *.txt`'
++ echo def.txt
++ awk -F. '{print $1}'
+ folderName=def
+ '[' -d def ']'
+ rm -R def
+ mkdir def
+ cp def.txt def
Narayans-MacBook-Pro:TerminalCommands narayan$ ls -p
Helloworld.class        abc.txt                 forloop.sh
Helloworld.java         def/                    linux-content/
abc/                    def.txt                 temp/
Narayans-MacBook-Pro:TerminalCommands narayan$ ▊
```

Running the script using ./forloop.sh

1: Script is run with debug statements
2: Indicates first abc.txt is being processed
3: Setting the folderName variable with abc
4: Checks if folder abc exisits
5: Folder exists hence removing the folder and its contents
6: Creating abc directory
7: Copying abc.txt file to abc folder
8: Similarly working with the def.txt file

Thank you
